

E-Commerce Dashboard Storytelling & Business Recommendations

1. Executive Summary

This dashboard provides a high-level overview of business performance across sales, profit, customer behavior, discount impact, operational efficiency, and category performance.

The business generated strong overall sales and order volume, indicating healthy customer demand. However, profitability varied across categories, customer segments, and discount levels. Technology emerged as the strongest profit-generating category, while Furniture showed weak profitability despite contributing to sales. Trend analysis revealed revenue growth over time, but profit fluctuations indicate operational inefficiencies and margin pressure.

Additionally, discounting showed a clear negative impact on profit, suggesting that aggressive promotional strategies may be hurting business performance. Customer and segment analysis also highlighted opportunities to focus more on high-value customers and profitable business segments.

2. Dashboard Overview

The dashboard is structured into four key business layers:

- **Key Business KPIs** → overall business health
- **High-Level Performance** → regional and category performance
- **Trend Analysis** → monthly sales and profit trends
- **Deeper & Operational Analysis** → customers, discounts, segments, and shipping patterns

3. Key Dashboard Insights

i. Regional Sales Performance

Observation:

The West region generated the highest sales, followed closely by East, while South contributed the least revenue.

Business Takeaway:

The business should continue investing in strong-performing regions while identifying reasons behind lower sales performance in weaker regions.

ii. Category Profitability

Observation:

Technology generated the highest profit contribution, while Furniture showed significantly lower profitability.

Business Takeaway:

The company should prioritize high-margin categories such as Technology and review pricing, discounting, and operational efficiency in Furniture.

iii. Monthly Sales & Profit Trend

Observation:

Sales generally increased over time, but profits remained inconsistent and volatile across months.

Business Takeaway:

Revenue growth alone is insufficient; the business should focus on cost control, pricing optimization, and operational efficiency to improve profit consistency.

iv. Discount vs Profit

Observation:

Higher discount levels were associated with reduced profitability, with excessive discounting negatively affecting margins.

Business Takeaway:

The business should avoid unnecessary discounting and adopt a more controlled pricing strategy focused on profitability rather than only sales volume.

v. Top Customers Analysis**Observation:**

A small group of customers contributed disproportionately higher sales compared to others.

Business Takeaway:

Retaining high-value customers through loyalty programs, personalized engagement, or premium services could significantly improve long-term revenue stability.

vi. Segment & Ship Mode Analysis**Observation:**

The Consumer segment generated the highest sales and profit contribution. Standard shipping accounted for the majority of sales.

Business Takeaway:

The business should prioritize its strongest customer segment while continuously optimizing logistics efficiency for high-volume shipping modes.

4. Final Business Recommendations

Based on dashboard findings, the following strategic actions are recommended:

- Reduce excessive discounting to improve profit margins.
- Prioritize high-profit categories such as Technology.
- Investigate weak profitability in Furniture and optimize pricing strategy.
- Strengthen customer retention efforts for high-value customers.
- Focus marketing and inventory planning on strong-performing regions.
- Improve profit consistency through better cost and operational management.
- Continue investing in profitable customer segments while monitoring underperforming areas.
